("Great Western Mining", "GWM" or the "Company")

Preliminary Results for the year ended 31 December 2013

Great Western Mining, the AIM (AIM:GWMO) and ESM quoted mineral exploration company with 73 sq. kilometres of mineral claims in south-west Nevada USA, is pleased to report its Preliminary Results for the year ended 31 December 2013.

Results Highlights:

- Completion of maiden 2580 feet drilling programme on the M2 copper target
- JORC compliant Phase 1 Report produced
- Loss for the year: €448,319 (2012: €369.186)
- Basic and Diluted loss per share (cent): 0.69 (2012: 0.76)
- Company fully funded to fulfill its current plans

Post year-end Highlights:

- Phase 2 drilling programme, with the objective of establishing a JORC compliant Inferred Resource, initiated over the M2-Smith copper target
- Phase 1 drilling programme initiated over Target 4 copper-gold prospect

Chief Executive, David Fraser commented: "Following a year of progress in 2013, I am pleased to report that the company started 2014 in the strongest financial position in its corporate history, and is in the process of executing a funded programme designed to demonstrate the value in its extensive bank of Federal land leases in Nevada."

Chief Executive's Report:

During the first half of the year the Company completed the first ever drill programme on its 73 sq. kilometres claim block in southwest Nevada. A total of nine reverse circulation holes, for 2580 ft, were drilled. Samples were taken every five feet and analysed by Florin Analytical Laboratories, Reno, Nevada. In all, some 1500 sample points were examined for copper, silver and gold. Encouraging copper grades were encountered in eight out of the nine holes drilled; holes 4 and 5 intersected 30 feet of oxide copper at 1.13% Cu and 0.84%Cu respectively, and Hole 1 contained 40 feet of oxide copper at 0.2% Cu. Significant gold was also noted in Hole 4. The resulting JORC compliant report, produced by GWM's independent consulting geologist, Donald Strachan, Consulting Geologist QP CPG, indicated that mineralisation had a known width of 120m and strike length 1200 metres long.

The M2 target, located on the eastern flank of the Huntoon Valley consists of Mesozoic sediments and volcanics, where the mineralisation is associated with the contact with intermediate intrusives. The target was defined using ASTER spectral analysis, airborne and ground magnetics, induced polarisation (IP), soil and rock geochemistry and geological mapping.

Following these highly encouraging results the Great Western management team carried out detailed analysis to devise a drill programme with the aim of establishing a JORC Inferred Resource over the M2 target, and to test the hypothesis that the mineralisation is a stratiform deposit extending southwards and to the east side of Bass mountain to the former Smith mine. Hence the company now refers to the target as M2-Smith.

The management team conducted a series of presentations and an institutional road show in the City of London, from late October to early December 2013, to raise awareness and support for the planned programme. In January 2014 the company was able to successfully complete two institutional placings, raising total gross proceeds of ± 2.3 million.

As we go to press the company is in the process of executing a 14,000 feet programme of Reverse Circulatory drilling, in approximately 30 drill holes, designed to appraise and evaluate the extent of the resource at the M2-Smith target.

In addition to the drill programme at M2-Smith, the proceeds from the placing have enabled the company to initiate a drilling programme on its Target 4 copper-gold prospect. Target 4 is potentially a larger prospect approx. three miles from M2-Smith. Significant work has already been completed on Target 4. This work includes remote sensing using aero-magnetics, ASTER infrared imagery and followed up with an Induced Polarisation study. Surface exploration has included a magnetometer survey, soil sampling, outcrop mapping and sampling, and trenching. Target 4 is now "drill ready", and the company has appointed Environscientists Inc., based in Reno, Nevada, to provide project management services, conduct baseline studies, and produce a Plan of Operations for submittal to the US Forestry Service in order to obtain the necessary drilling permits.

The company anticipates being in a position to initiate a 6 to 9 hole reverse circulatory discovery level drill programme in the autumn of 2014. Once the extent of the outcropping oxide copper mineralisation is clearer, and the relationship with the intermediate intrusives is better understood, deeper drilling may be justified to test the extensive IP anomaly which may be indicative of buried primary sulphide mineralistation.

On the west side of the valley is the former Huntoon mine (Target M1) where copper-gold ore was mined intermittently from 1906 to 1925. Extensive outcropping copper mineralisation and

widespread propylitic alteration occur in and around the old mine. A limited programme of mapping and sampling is planned to identify the extent of the mineralised zone(s) and drill targets.

To the south The Golconda Thrust Group, containing the four claim groups: Tun Group; EM group; RH Group and JS group have all been identified as interesting anomalies by both ASTER and IP surveys. An initial field programme of soil and outcrop sampling is planned to identify the mineralised zones.

Following a year of progress, I am pleased to report that the company started 2014 in the strongest financial position in its corporate history, and is in the process of executing a funded programme designed to demonstrate the value in its extensive bank of Federal land leases in Nevada.

David Fraser Chief Executive
